

ASTINA ERP

"ERP yang menjawab kebutuhan Tambang Anda"

www.astinaconsulting.com

Email: info@astinaconsulting.com

Astina ERP understands transactional mining data.

For over 10 years we have worked with the mining industry to provide specialized technology solutions that oversee and manage the commercial aspects of mining businesses, whether open-cut or underground.

Our primary software product is an ERP suite, similar to those offered by SAP, Microsoft (Dynamics) and Oracle (JD Edwards), only we grew out of, and specialise purely in, the mining sector.

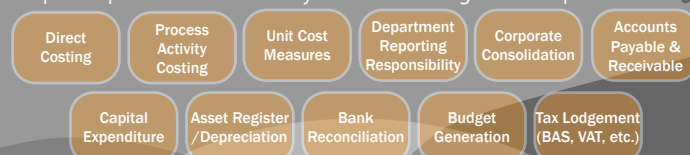

We also recognise the industry's pressing need for greater productivity.

We are now focusing on ways to optimise specific mining work practices using advancements in the data analytics and visualisation space.

FINANCIALS

Astina ERP Financials module is tailored to the complex needs of the mining sector while providing simplified work-flows for Mining Accountants.

- Fully functional advanced budgeting features
- Supports multi-company environments
- Flexible, user-defined reporting hierarchies & comprehensive in-built reporting
- Fully functional activity-based costing
- Capital Expenditure functionality based on mining sector requirements.

SUPPLY & UTILITIES

Designed for mining and industrial operations, our Supply & Utilities module provides a solution to effectively manage resources throughout the supply chain journey from start to finish. Includes the ability to optimise parts management.

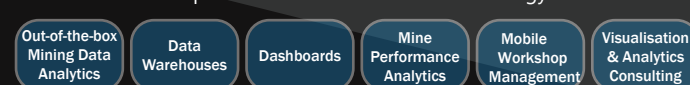

MARKETING & LOGISTICS

Designed to manage & track commodity from mine to customer. Covers complex contract & invoice documentation requirements.

VISUALISATION & ANALYTICS

Astina ERP offers a range of 'out of the box' BI analytics solutions including our new mobile device enabled *Astina ERP Analytics Product Suite* which leverages data from the Astina ERP and Astina Mining Production dispatch based on latest RFID technology.

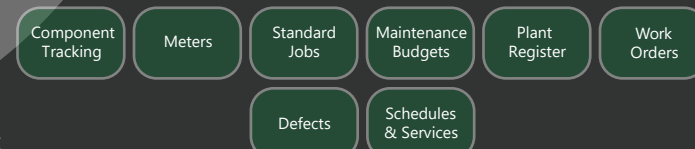

HUMAN RESOURCES

Our HR system encompasses a powerful Award and Roster Interpretation function, advanced payroll processing engine offering pay generation from manual timesheet entry to a fully automated payroll and everything in between. The Health and Safety and Training & Development modules integrate into the payroll system and other modules across the ERP providing an advanced deployment management and incident tracking solution.

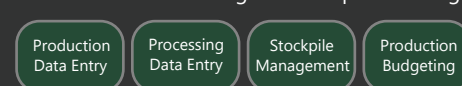

OPERATIONS - PLANT MAINTENANCE

A suite of highly configurable operational tools which record and analyse maintenance history, enabling accurately forecasts & budgeting.

OPERATIONS - PRODUCTION

Fully integrated system that allows organisations to plan, measure and manage the complete mining process.

OUR DIFFERENCE

- Complete, integrated system - no need to purchase extra modules
- Financial work-flows tailored to the needs of the mining sector
- Integrated Production Recording & Plant Maintenance modules
- Fully integrated Health & Safety, Training & Development, and Skills Competency sub-modules
- Fully automated Payroll - including Bonus, Allowance & Considerations
- Employee Self-Service HR Kiosk - integrated to Payroll
- Fully integrated Stock issue/receipt Barcode Scanning
- Mining specific Production Recording, fully integrated with ERP
- Ability to record and report against production budgets & forecast
- Automatically track stockpile transactions and balances
- Fully integrated Plant Maintenance module tailored to Mining
- Marketing & Logistics - track coal from mine to port - suits all mining methods - covers complex contract quality requirements.

COMPLETE COVERAGE

Traditionally ERP's focus purely on retrospective 'record keeping' and data capture to manage cross business area dependencies and financial impact. The ASTINA ERP however is geared to capture and leverage relevant data throughout the complete mining process from 'pit to port', including in the vital areas of production, plant maintenance, payroll, HSEC, marketing and logistics. It is also structured to facilitate use across the full mining life-cycle from exploration to project development and operations and work with the corporate, company and entity structures common in the mining industry.

ASTINA ERP provides a complete ERP solution encompassing development, implementation support and consultation that has the scalability to grow with your business, whilst the continual evolution of our product means that you'll never need another ERP.

TRUSTED BRAND

With over 10 years' experience in the sector, ASTINA ERP Systems have become true specialists in the mining industry with an extensive client base in Kalimantan, both of Mining Contractor and Mining Owner

Being flexible & responsive and offering 'fair value' technology solutions enabled us to secure a strong foothold in the market and formed the foundation for our partnership approach to software product development.

As a direct result of these client partnerships, the ASTINA ERP application evolved over time to build-out functions that address the underlying needs of mining operational teams, facilitating better management and ultimately performance of the entire business area.
